 SALES 386-257-2956

### PRODUCT OVERVIEW

Our iBeam 360 Degree View 3D Camera System is the best of the best in cutting edge safety equipment. Four cameras mount to each side of the car and the included control processor blends the feeds into one seamless 3D panoramic view. This system is custom calibrated to each specific make and model for optimal image fusion. Integrated turn and reverse triggers provide instantaneous displays of side or rear camera feeds when changing lanes, parking or reversing. This cutting-edge system provides an unobstructed view of vehicle surroundings at all times, while recording all four channels simultaneously. Drivers can also toggle through multiple camera views and are alerted to road hazards to prevent potential collisions. For surveillance purposes, the camera system can also record while the vehicle is parked. For ultimate vehicle safety and security, iBeam's 360 Degree 3D View Camera System is the top level solution.

- 4 camera 360 degree 3D surround view kit
- Camera images are fused together by the included control processor to create a continuous 3D surround view
- Automatically view full screen images of side or rear cameras with integrated turn & reverse triggers
- Cameras can be toggled through multiple views for maximum guidance
- System is custom calibrated to each vehicle individually for optimum image fusion
- DVR simultaneously records all four independent channels
- DVR can provide parking surveillance recording
