386-257-2956

### PRODUCT OVERVIEW

Upgrade your vehicle's safety and parking experience with this adjustable spare tire camera kit from iBEAM. This camera setup is designed to provide drivers with a clear view of their surroundings while parking or reversing, offering the ultimate solution for enhancing a vehicle's safety and maneuverability. The kit includes a multi-adjustable bracket, high-quality camera, and wiring to ensure a hassle-free installation.

The versatile bracket of the TE-ASTCAM is specifically designed to mount securely to the factory studs of the spare wheel with over 200 vehicle applications. It offers an impressive range of adjustability, allowing drivers to position the camera exactly where they need it. The bracket's camera stem can be adjusted both side-to-side and up and down, providing drivers with optimal flexibility and customization options. Additionally, the head of the bracket is bendable to achieve the perfect angle adjustment for each unique vehicle.

Equipped with high-quality metal housing, the included camera delivers durability and longevity. Its 170° field of diagonal view ensures a wide coverage area, minimizing blind spots and providing a comprehensive perspective of the vehicle's surroundings. The camera also features parking guidelines, enabling drivers to accurately gauge distances and maneuver their vehicle with ease.

With an IP67 rating, this camera is designed to withstand inclement weather, ensuring reliable performance even in challenging environments. Additionally, the TE-ASTCAM boasts excellent low-light capabilities with its 0.6 LUX night vision, allowing drivers to navigate safely in dimly lit areas or during nighttime parking.

For a convenient power connection via the taillight, the addition of iBEAM's Pulse Width Modulation Stabilizer (TE-CAMFLTR) is recommended (sold separately). This accessory ensures a reliable and efficient power supply to the camera, further enhancing its functionality.
