

LPA-1.2 | 2 Channel Line-Output Converter

LPA-1.4 | 4 Channel Line-Output Converter

Quick Start Guide

The L.O.C.PRO ADVANCED™ can be used to add amplifiers to an audio system that does not have RCA outputs or when replacing an OEM radio and retaining the factory amplified system. Variable Gain Controls with Clipping Indicators, Selectable Ground Isolation and Load Select features ensure a pure, noise-free signal for any type of audio system.

This Quick Start Guide will get you going, but if you need additional help or information, please visit our website or contact Technical Support.

Features & Wiring Information

12V
Connect to a fused +12V constant source

GND
Connect to a good chassis ground

REM IN
Remote turn on input (+)

REM OUT
Remote turn on output (+)
The LPA will provide a +12V Remote Output using DC Signal Sense from the Right channel inputs

SPEAKER SIGNAL INPUTS
Connect to head unit or amplifier speaker outputs

GROUND ISOLATION
Selectable: GND / ISO / 200Ω
Default: ISO
If ground / engine noise is present, the jumper can be repositioned.

GAIN
Variable: -27.3dB — +3.2dB
Allows gain adjustment of the output signal

CLIP
Indicates signal clipping when gain is set to high

RCA SIGNAL OUTPUTS
Connect to amplifier inputs

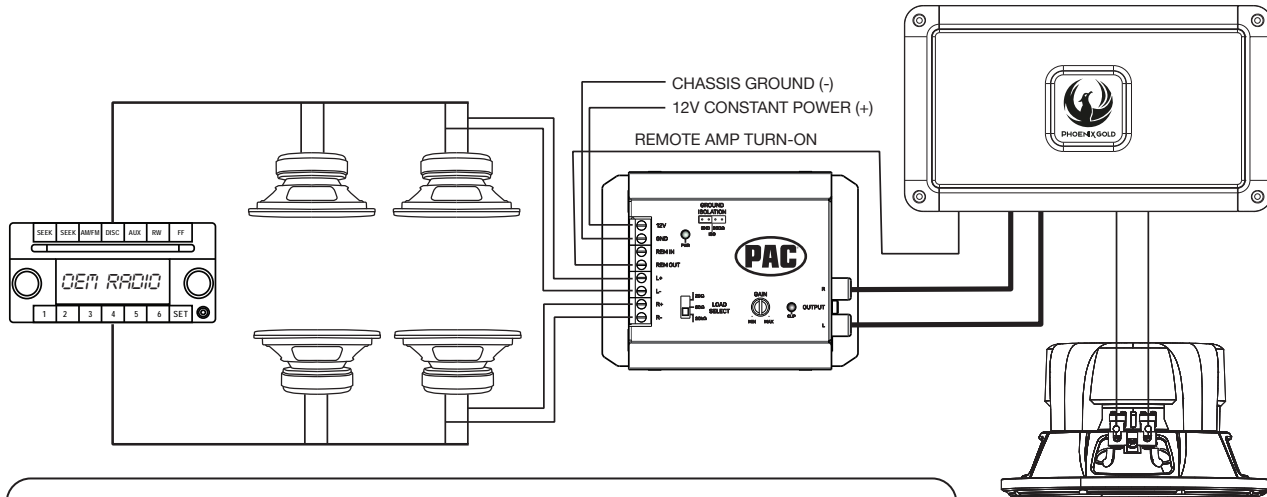

LOAD SELECT
Selectable: 20Ω / 60Ω / 20KΩ
Default: 20KΩ
For factory audio systems requiring a resistance load to output audio, select 60Ω first, then 20Ω. All others use 20KΩ setting.

Example Installation

Speaker level input from a radio to RCA level output for an aftermarket amplifier is the most commonly used configuration for the L.O.C.PRO ADVANCED. This will create RCA level outputs from a radio that only has speaker level outputs.

In the example below, the Positive(+) and Negative(-) wires of two speakers are “tapped” and connected to the SPEAKER SIGNAL INPUTS of the LPA. The speakers will continue to play as normal. The REM OUT is connected to the amplifiers turn-on. When the radio is turned on the LPA will automatically turn on the amplifier. Lastly, the RCA SIGNAL OUTPUTS from the LPA are connected to the aftermarket amplifiers inputs.
