

"...a radical departure from just about every other camera on the market." - *Car and Driver*

Introducing the ultimate automotive camera system

HORIZON

The Waylens Horizon is the only automotive camera system specifically designed to amplify fun behind the wheel. Consisting of a high-precision camera, plug-n-play OBD-II transmitter, one-click remote and mobile app, the Horizon lets drivers overlay performance data right into video and share their best driving moments in real time.

WAYLENS™

Precision, high-performance camera: The Horizon system starts with a precision HD camera that captures your drive in crystal-clear video. A GPS equipped windshield mount makes it easy to install and remove.

Plug and play vehicle data: Vehicle performance data, including G-Force, Pitch and Roll, Boost and other critical parameters are gathered by our plug-n-play OBDII data module. The result is a total driving experience.

Capture the best moments: We've made it easy to instantly mark a highlight in the video. Simply tap our remote during a hair-pin turn or other critical event and the system files it separately for easy retrieval later.

Easy editing and sharing: Video is stored on a high-performance SD card in the camera, and you can easily access files from your mobile device. If you want to edit on a larger screen, simply pull the camera or SD card and review and edit on your desktop with our application software.

Application Features: We have the features drivers want. Waylens GO lets users post 0-30 and 0-60 times to our cloud-based leaderboard in real time. Our LapTimer uses GPS to map out a track and automatically track lap times.
